

Systemic Functional Profile of Marathi

Overview

Systemic Functional Grammar (SFG) is an applicable linguistics. Its theory is comprehensive, semanticky, paradigmatic and textual. M.A.K. Holliday is the chief exponent and M.I.M Matthiessen has been the co-exponent of the systemic functional Grammar. According to Halliday Language is a social semiotic and system is a network of sets of options in a given context. Function is the significant relation among the constituent units across all the domains, levels and ranks of language. Grammar is the shared experience of the speech community. Metafunctions are spectral conflations overlapping each other in one and the same clause of language. These metafunctions are Ideational, Interpersonal and Textual. SFG describes language at both the planes of expression and content in a given context. It gives us description of text in context, not just the description at the clause level. Therefore the course aims to explore systemic functional profile of Marathi and to review SFG Model and Grammar of Marathi and apply it to Marathi primarily to describe its Lexicogrammar, Metafunctions, Grammatical Metaphor and Text in context.
